

OUR ENVIRONMENTAL POLICY

COMEL S.p.A. is an Italian company capable of carrying out mechanical processing and coating activities according to customer specifications and is able to perform these activities at the site located in Via Sorgaglia no. 21 in Arre - PD.

COMEL S.p.A. is the result of over 45 years of experience and is constantly committed to passing on the know-how acquired over time to its employees.

The policy of continuous reinvestment in the company has strengthened its foundations, making the services offered competitive and innovative at an international level.

With this in mind, COMEL S.p.A. is strongly committed to operating in a way that contains and reduces the environmental impact of its activities, with the objective of providing customers and the market with products whose quality is also synonymous with respect and responsibility towards the environment.

For this reason COMEL has adopted an Environmental Management System in compliance with the UNI EN ISO 14001:2015 standard; this system is specifically applied to improve the company's environmental performance in the execution of the services offered.

This Environmental Policy therefore defines the company's attention towards the environment, which takes shape through the implementation of specific pollution prevention programmes and the improvement of everything relating to environmental impact.

Our commitment is primarily directed towards involving all interested parties, customers, suppliers, management, personnel and supervisory authorities:

- in maintaining the environmental organisational structure over time, so that environmental protection is considered an integral part of the company decision-making process;
- in fully complying with all current legal requirements relating to environmental protection, and with any other requirements subscribed to by the organisation concerning its environmental aspects;
- in raising awareness and training personnel on environmental matters, promoting environmentally responsible behaviour;
- in monitoring the consumption of energy resources and raw materials, as well as environmental impacts;
- in collaborating with and influence suppliers who are attentive to the environmental impacts arising from their activities;
- in controlling possible emergency situations and manage them according to specific procedures and planned intervention plans;
- in carrying out internal audits in order to monitor environmental performance.
